

## Steps to setup PUTTY:

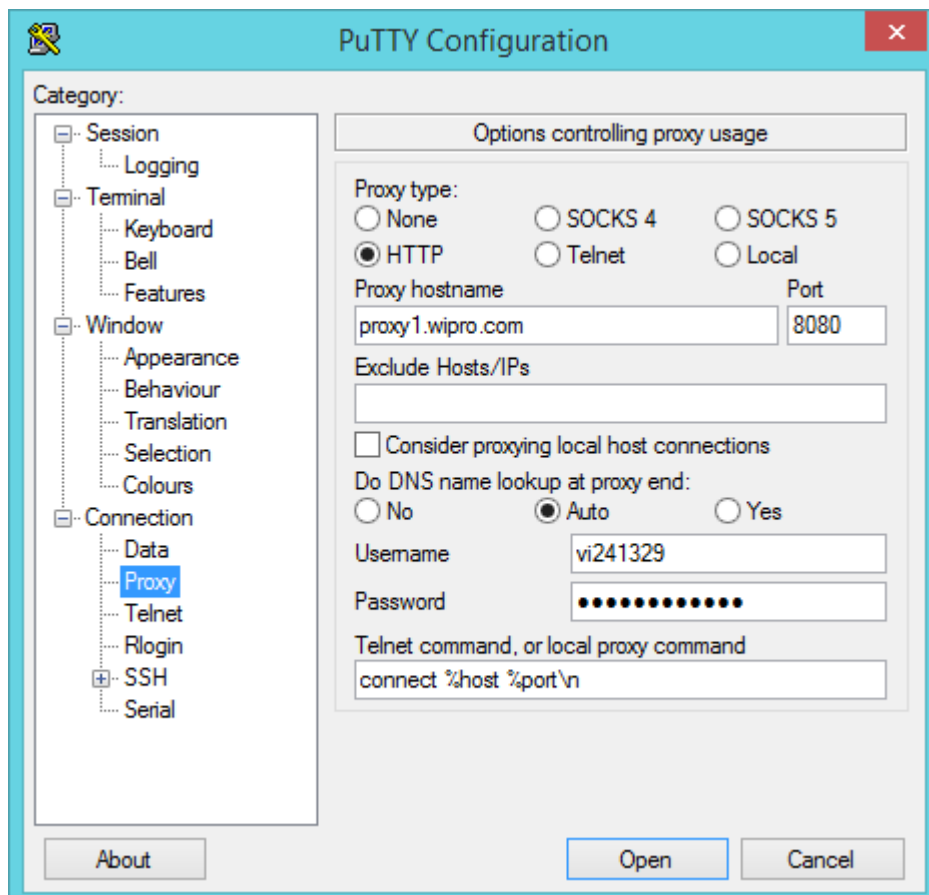

- 1) Open Putty

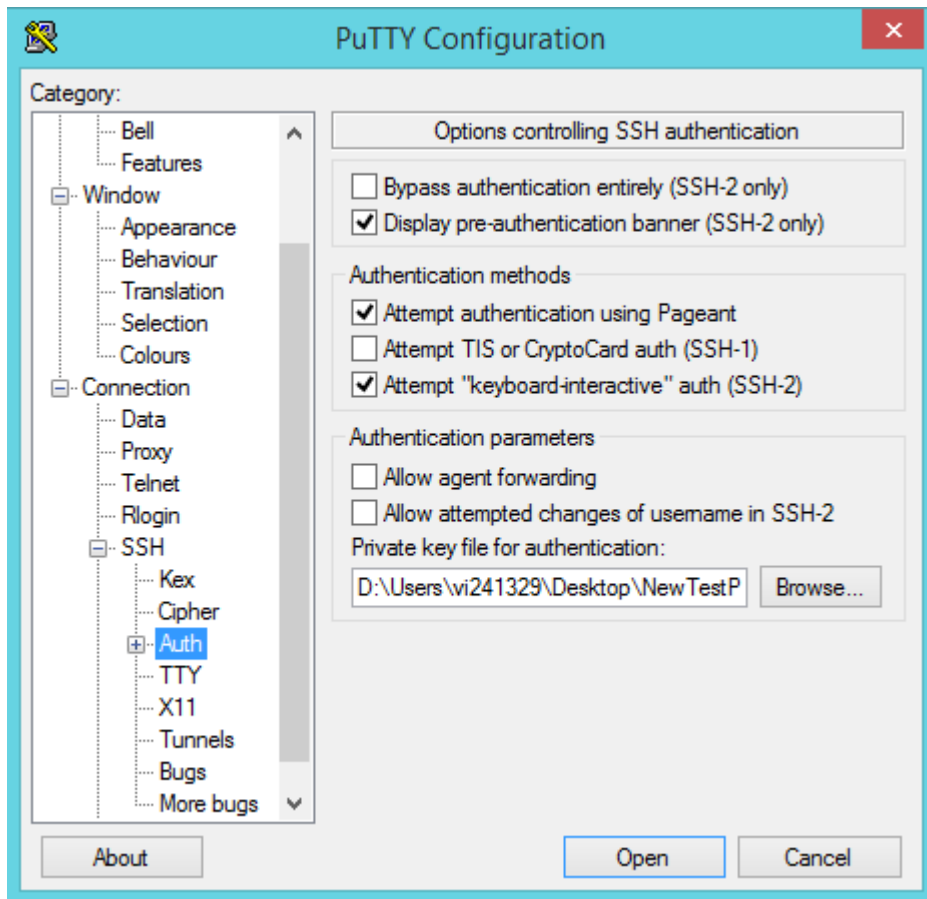

- 2) Enter Hostname (or IP address), Port No as 443 and server name and click save.

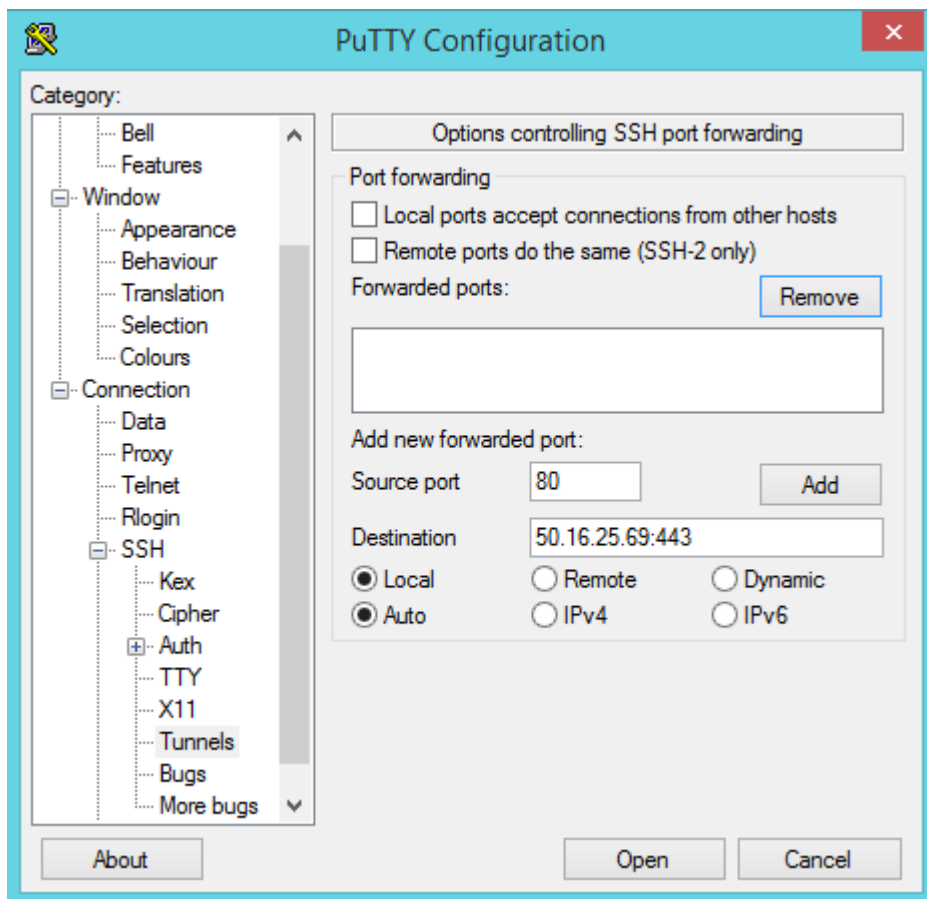

3) Now click on Connection -> Proxy and enter the proxy details as shown.

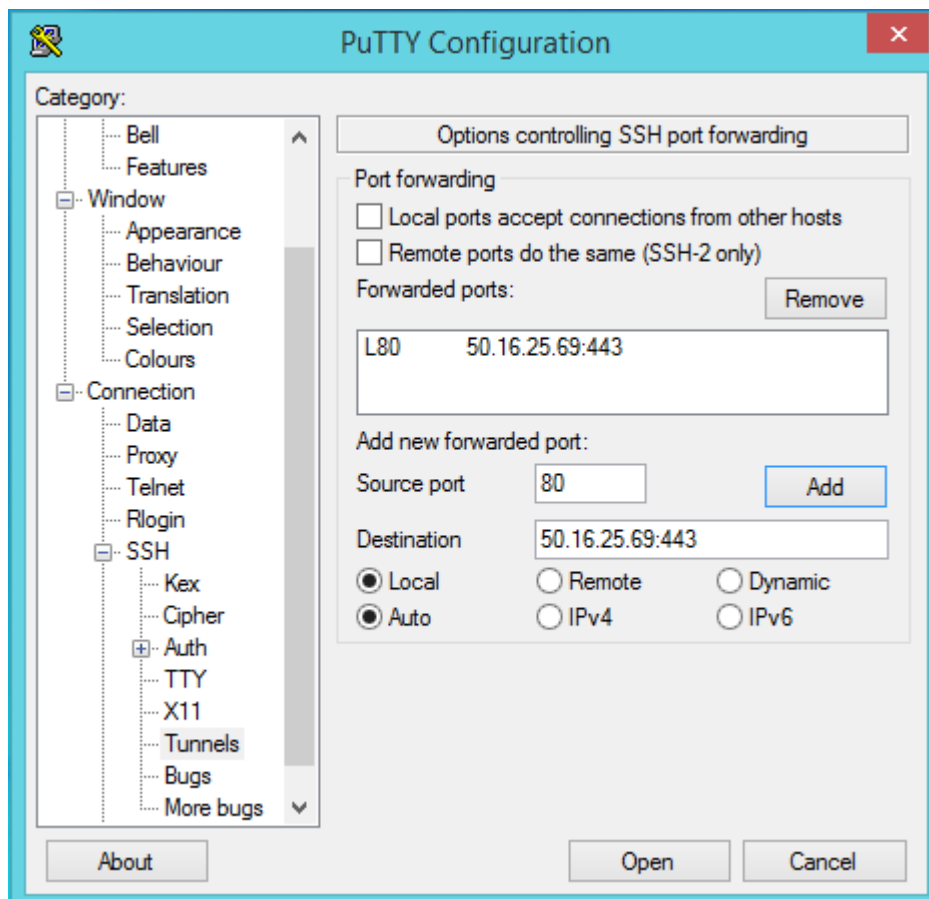

- 4) Go to, Connection -> SSH and click Auth and browse the PPK file for authentication.

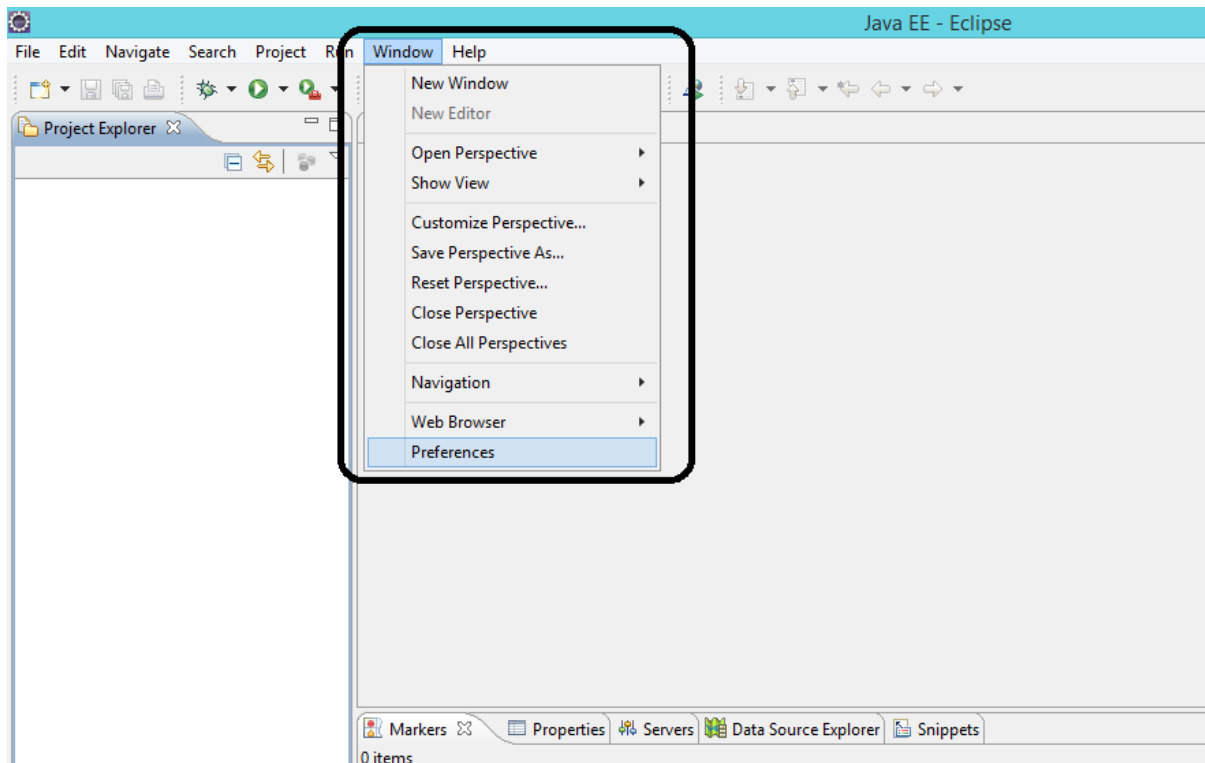

5) Go to, Connection -> SSH and Tunnel and create tunnel as shown below.

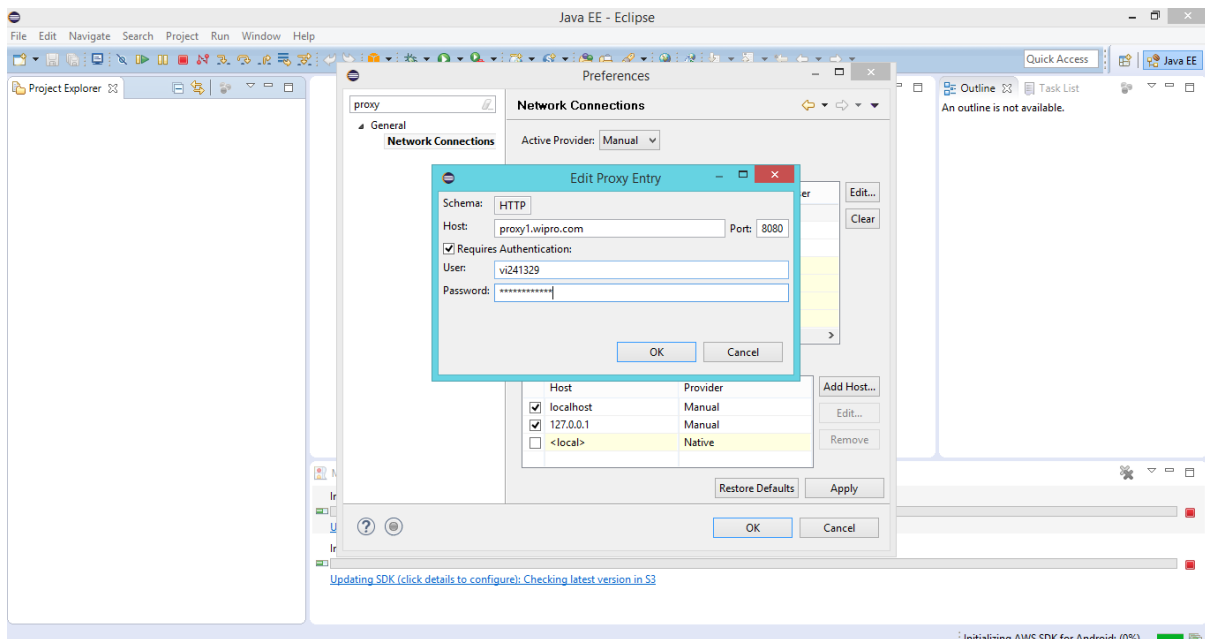

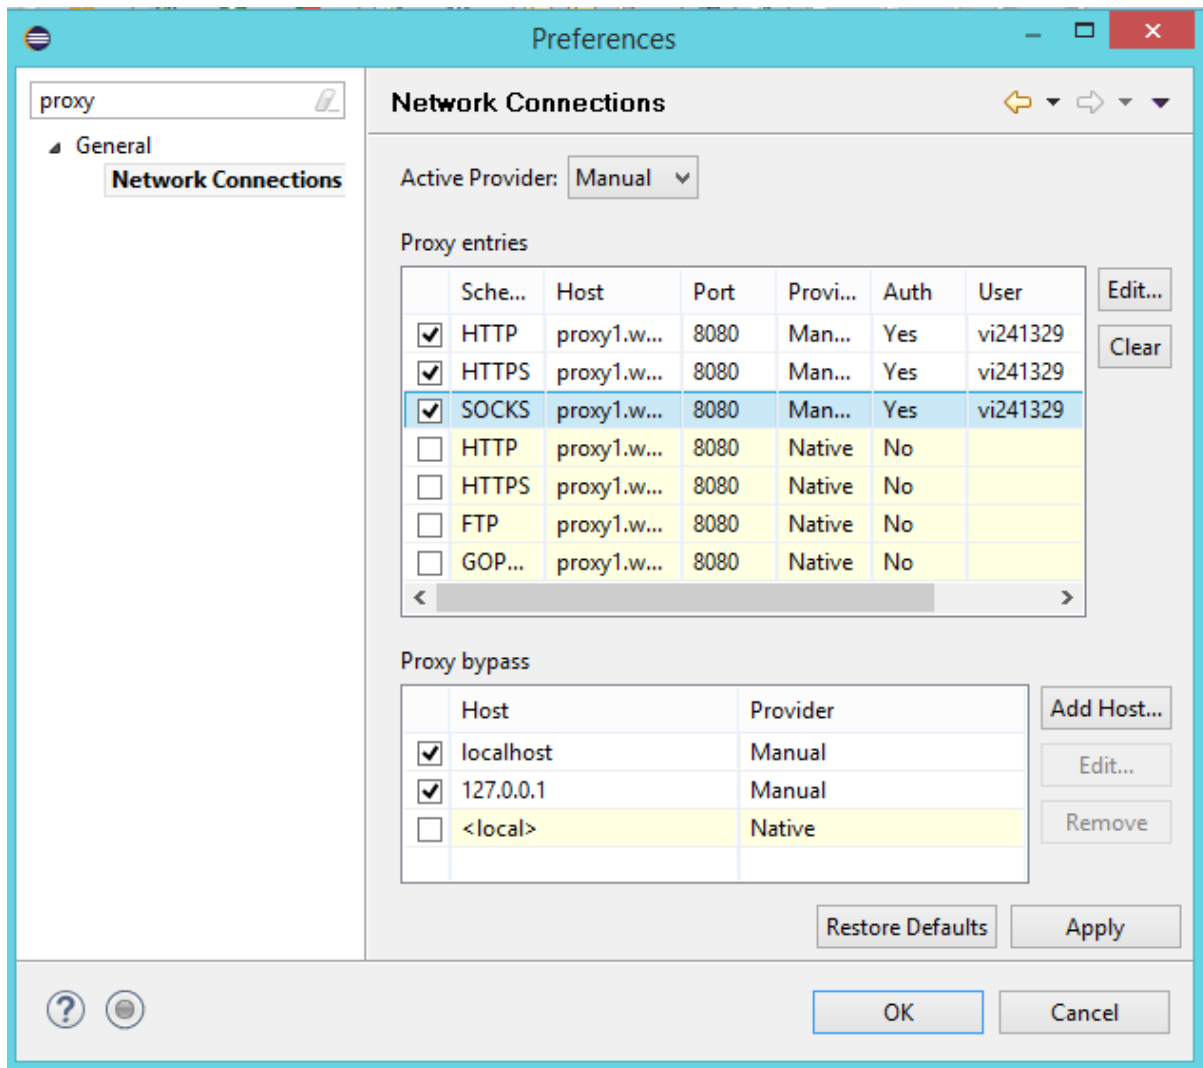

## Steps to setup Eclipse:

- 1) Open Eclipse, go to Window -> Preferences

- 2) Go to Network Connections and enter Proxy details for HTTP, HTTPS, SOCKS. Use Proxy as **proxy1.wipro.com**

### **Adding your AWS Access Keys to the AWS Toolkit for Eclipse**

To add your access keys to the AWS Toolkit for Eclipse:

1. Open Eclipse's Preferences dialog box and click AWS Toolkit in the sidebar.
2. Type or paste your access key ID in the Access Key ID box.
3. Type or paste your secret access key in the Secret Access Key box.
4. Click Apply or OK to store your access key information.
